Low cost, Secure & Compliant Cloud Archive

Self-service SaaS platform to manage data growth, reduce costs and stay compliant

Overview

80% of enterprise data is believed to be unstructured and distributed across silos of active & legacy file and email repositories. With 3X data growth and lack of centralized controls, these silos of data repositories can quickly turn into unmanageable data swamps. Such an outcome would result in regulatory non-compliance, data breaches, loss of data access and an increase in IT budgets.

SOLIX ECS can help by identifying infrequently accessed files and emails from repositories and moving them to a low-cost cloud archive. With enterprise controls and self-service capabilities, SOLIX ECS will empower IT, business and governance teams alike with streamlined file and email archiving, access and controls.

HIGHLIGHTS

Self-service cloud archiving for all types of files and emails

Automate archiving with inbuilt source connectors and end-user drag and drop archiving

Progressive retention management and classifications help automate regulatory compliance

E-discovery with Legal-hold and audit help create a defensible discovery and faster response to data requests

Granular access controls and AES 256 bit encryption ensures data security and privacy

Cloud native platform offering unlimited scalability and elasticity

Pay as low as 15 cents a GB cost for storage. Pay nothing for users

Unlock valuable IT infrastructure and people resources from managing archives

SOLIX ECS also empowers business and compliance users to contribute to the archives through permission-based self-service drag & drop archiving capabilities. The smart Data validation ensures data integrity and completeness of archiving.

Overall, SOLIX ECS makes it easy and efficient to accelerate, streamline and automate archiving processes at scale.

WHY CHOOSE SOLIX ECS CLOUD ARCHIVE?

Archiving on Auto-Pilot

With inbuilt connectors for file and email analysis across many popular sources such as SharePoint, NFS, CIFS, SFTP, MSExchange, O365, Gmail and Cloud object stores, SOLIX ECS makes it easy and efficient to identify and automate archiving of rarely accessed files and emails to a central cloud archive.

Enterprises can also leverage the ECS APIs to integrate the ECS archiving functionality directly in to their applications.

24/7 Secure Access to Archive Data

Business, IT and compliance users can find, retrieve and view content quickly and efficiently through an intuitive browser-based content explorer that is complemented by powerful cognitive text search and file and email viewer capabilities. Integration with SSO services, and permission-based access controls ensure reliable and secure 24/7 access to archived data.

Automate Data Retention

With smart archiving tools and progressive and granular data retention policies, enterprises can automate the complex process of identifying eligible content from source applications, archiving them, and enforcing retention policies at an enterprise scale. The automation can be implemented at an organization, department, user, process or content level making it comprehensive enough to manage all data retention scenarios.

Smart Classification, E-Discovery & Legal Hold

SOLIX ECS provides progressive policy-based file classification and tagging capabilities for faster E-discovery, organization and application of legal holds. With the ability to export only the metadata or full content, the e-discovery; processing and responding to data requests is a lot faster and efficient.

Advanced Security and Privacy

Powerful role-based access controls and integration with organization's directory services or SSO solutions ensure seamless yet controlled and secure access to content. Enterprises can also setup user groups with specific rights and permissions to content (ex: Finance Department, Compliance teams). Additionally, enterprises can automate classification of sensitive data at scale and enforce appropriate access & retention policies in real-time. ECS also ensures security at the transport and storage levels with an always "ON" AES 256-bit encryption both in transit and at rest.

Comprehensive Audit Reports

SOLIX ECS captures a comprehensive audit trail of all actions taken within your enterprise account. Right from archiving to content management and even user management, every single action is tracked and is available for reporting at any point in time to provide a defensible overview of your content management practices.

Reduce Costs & Free Up IT

SOLIX ECS Cloud Archive as-a-service delivers significant cost savings by moving rarely accessed files and emails to low-cost cloud storage. In the process it unlocks valuable IT infrastructure and reduces maintenance time and effort in managing active and archive content repositories and fulfilling data requests.

Additional significant savings are realized on the archive from automation, storage tiering, purging and pay-as-you-go capabilities.

Ensure Compliance with External Regulations

With SOLIX ECS Cloud Archive, you can stay compliant with privacy regulations such as SEC 17a-4, GDPR, FLSA, SOX, IRS, and HIPAA. Choice of global data centers and WORM compliance for data immutability makes it easier to comply even with the most stringent compliance requirements.

Solix SaaS Advantage

| Self-service | Fully Managed | Secure & Compliant | Intelligent & Flexible Storage |
| Unlimited Scale | Unlimited Users for Free | 24/7 Support | Low Cost & Pay-as-you-go |
