

SOLIXCloud Enterprise Content Services

Intelligent content management and services for the data-driven organizations

Organizations have a multitude of active and legacy content repositories and applications across departments and divisions. Additional content silos are emerging regularly, adversely impacting productivity, compliance, data protection, and information availability. It becomes imperative for organizations to tackle this content sprawl actively through a unified and modern approach to content management.

Introducing SOLIXCloud ECS

SOLIXCloud Enterprise Content Services (ECS) is a cloud-native solution that delivers organizations a fully managed content services platform to store, govern, access, share and collaborate all their content, all at cloud-scale and through a self-service modern web UI.

KEY FEATURES

Self-Service Data

SOLIXCloud ECS is designed to provide self-service data experiences for users in compliance with organizational policies. Users can upload / download, browse, organize, and access and share content. These self-service capabilities empower users and developers to leverage content in innovative ways to realize the objectives of digital transformation.

HIGHLIGHTS

Tackle Content Sprawl: One platform for all your legacy and active content.

Power digital processes: Integrate with new and existing digital processes with ease

Enable self-service data: Users can now access data anytime anywhere on their own.

Central controls: Manage enterprise users and content centrally

Ensure governance & compliance: Enforce information governance policies to ensure compliance with internal and external demands

Fully Managed: Cloud software-as-a-service with 99% uptime SLA and 12 9's data durability

Low cost & Pay-as-you-go: Pay as low as \$0.24/GB and pay nothing for User accounts.

Powerful Search

Finding the right piece of content quickly and efficiently is crucial for the productivity of users, compliance officers, and IT personnel. With SOLIXCloud ECS Advanced Search, users can now scan through petabytes of data efficiently to find specific files of interest quickly. Users can search by metadata, full file content, and classification tags. Powerful filtering capabilities simplifies and improves the discovery.

Governance & Compliance

Organizations must deal with a rapidly evolving data security and compliance landscape. SOLIXCloud ECS includes a comprehensive information governance feature that enables organizations to use policy-based rules to enforce data retention requirements, perform ediscovery, and enforce legal holds. In addition, the service can meet data residency requirements while ensuring secure data communication and storage. All the data is encrypted both at rest and in-transit. Role-based access controls protect the privacy of the content.

Central Administration

SOLIXCloud ECS delivers a comprehensive approach to content management. Disparate data will be organized and managed into a central repository. With centralized administration capabilities, IT and compliance teams gain enterprise-wide visibility and control over the content uploaded and accessed. User management and administrative roles help further bolster organizational control and ensure data security.

Intelligent Bulk Data Migration

SOLIXCloud ECS enables intelligent bulk data migration powered by file analysis, sync, purge, and tagging capabilities. The self-service guided tool empowers admins to identify, migrate, organize, and govern data efficiently and at scale. When organizations need to move multiple TBs or petabytes of data within a short period of time, SOLIXCloud ECS offers a low-cost, secure offline data migration solution.

APIs for Digital Processes

SOLIXCloud ECS APIs enable organizations to build intelligent content-driven applications that ingest data into SOLIXCloud ECS and automate the availability of this data to users or applications for back-office processing. Additionally, you can enforce retention and legal hold progressively when ingesting content via the APIs. The APIs also allow you to search and access the content from your enterprise applications thereby enabling seamless availability of data for applications and business users.

DO MORE WITH ECS

Power Digital Processes: New operations and digital processes utilize content as a key component in innovative ways. SOLIXCloud ECS provides an open and secure content storage and services platform that enables modern digital transformation.

Information Archiving: Archive legacy file servers, records (HR, reports, invoices), department data, digital assets, and applications for long term retention and compliance.

Governed Storage: Create a single repository for legacy and active data for self-service access, enforcing governance policies, protecting data and staying compliant

Employee Cloud Storage: With SOLIXCloud ECS, you do not pay for the number of users accessing your organization's account. So go ahead and onboard all your employees, partners, suppliers, and customers to your SOLIXCloud ECS account to provide them with their own cloud storage. This not only reduces content sprawl but will also help the enterprise enforce governance and protect its data.

File Storage & Sharing: With ECS self-service capabilities, you can enable easy file storage and file sharing across your organization cost-effectively.

Intelligent Document Extraction: SOLIXCloud ECS offers an AI-driven Cognitive Data Capture for Receivables. Consider all of the content created in the receivables function, checks, lockbox files, remittance advice. This capability consolidates, scans, and extracts the information and makes it searchable. This enables finance teams to discover and research accounts receivable information efficiently.
